

Sparce[®] Xploid

Maximize the results of your applications with the power of microbial metabolites.

Sparce[®] Xploid increases the nutrition and efficiency of fertilizers, thanks to the biostimulation of metabolites derived from the microorganisms that compose it.

Benefits:

- Increases biomass in crops.
- Increases photosynthetic activity.
- Tolerance to biotic and abiotic stress conditions.
- Increases response to nutrients, bioregulators, and biostimulants.

Enhance nutritional efficiency naturally.

Recommendations and dosage table:

Foliar spraying in mixtures with:	Dose	Water consumption L/ha
Plant nutrients (macro and micronutrients alone or in combination)	50 mL	40 - 200
Biostimulants (mixtures of hormones, algae, amino acids, plant extracts, etc.)	100 mL	201 - 400
Bioregulators (products with high concentrations of hormonal ingredients)	150 mL	401 - 1200

Coadjuvant that acts as an enhancer.

It is compatible with other coadjuvants thanks to the incorporation of elicitor compounds and metabolites derived from microorganisms that stimulate rapid placement of the active ingredients or elements applied at the sites of action in the plant.
