

Vigofort[®]X

Benefits

- Supports vegetative and reproductive nutrient requirements.
- Contributes to balanced nutrient availability during crop development
- Helps maintain normal plant growth under standard agronomic conditions.
- Supports fruit development as part of an adequate fertilization program.

Vigofort[®]X is a new generation micronutrient fertilizer designed for crop nutrition, combining plant-derived benefits with essential elements such as boron and molybdenum.

This complementarity enhances the individual effects, promoting continuous growth and higher-quality harvests.

Highly effective fertilizer

- ✓ Strengthened and increased vegetative and reproductive structures.
- ✓ Fruits with improved quality, uniformity and color.

Application rates by crops

Recommended dosage on the label

Crop	Dose (Q/ac)	Application period
 Tree nuts	2.0 - 4.0	Start with a 5% bloom and repeat every 7 days.
 Fruit trees		
 Grapes	2.0 - 4.0	Start at full bloom and repeat every 2 weeks.
 Row crops	1.0 - 2.0	Start at the beginning of the vegetative growth and repeat after blooming every month.
 Vegetables		
 Tomatoes	2.0 - 4.0	Start at the first sign of bloom and repeat every 2 - 3 weeks.
 Cotton	0.5 - 1.0	One application during vegetative growth and repeat on flowering.
 Alfalfa	0.5	One application during vegetative growth and 5 days after each cut.
