Nutrient absorption booster
an advanced complex fertilizer designed
to optimize crop nutrition.

your **success**
story

GENEL[®]

Its innovative formulation enhances nutrient absorption efficiency while maximizing fertilizer utilization, helping your crops achieve peak performance and unlock their full yield potential.

Nutrient absorption booster

Fertilizer that promotes root growth, optimizing crop development and yield potential, enhancing the plant's ability to absorb nutrients.

- Improve soil fertility and nutrient availability
- Maximize utilization of both native and applied fertilizers
- Reduce resource waste while boosting ROI on fertilizer investments

Resulting crops with consistently higher productivity.

The ideal solution for

- Ineffective fertilization.
 - Soil complexity.
- Yellowed crop areas and low foliar emission.
 - Activate the water and nutrient absorption.

Application rates by crops

Crop	Dose (Q/ac)	Application period
 Tree nuts	2.0 - 4.0	Apply at the beginning of new root formation and apply a second time after harvest.
 Fruit trees		
 Grape	3.0 - 5.0	Apply in spring every 2-3 weeks during the period of new root growth.
 Tomatoes	2.0 - 3.0	Apply every 2-3 weeks after harvest.
 Vegetable crops		
 Row crops	1.0 - 2.0	Apply at the onset of new root development.
 Cotton	2.0 - 3.0	Apply through the irrigation system at the beginning of the crop cycle and repeat 15 days later.
